3,5-Dinitrosalicyloxazolines, Enantioselectivity,
Catalysis, Cyclopropanations

New optically active 3,5-dinitrosalicyloxazolines, derived from 3,5-dinitrosalicylonitrile and the chiral aminodiols (1*S*,2*S*)-(+)-2-amino-1-phenyl-1,3-propanediol, (2*S*)-(-)-2-amino-1,1,4,4-tetraphenyl-1,4-butanediol and (2*S*)-(-)-2-amino-1,1-diphenyl-1,3-butanediol, were prepared and used as *in situ* catalysts for enantioselective cyclopropanation reactions.
