Polyhalogenide, Dichloroiodate, Crown Complex,  
Cesium Compound, Crystal Structure

The new compound [Cs(18-crown-6)]ICl<sub>2</sub> has been prepared by the reaction of cesium chloride and 18-crown-6 with iodine chloride in ethanol and structurally characterized by X-ray diffraction methods. The geometries of the cation [Cs(18-crown-6)]<sup>+</sup> and of the anion ICl<sub>2</sub><sup>-</sup> are as expected.
