O-Methyl-N,N-di(methanesulfonyl)hydroxyl-  
amine, Crystal Structure

The crystal structure of the known title compound was determined by low-temperature X-ray diffraction (orthorhombic, space group Pbcn,  $Z = 4$ ). The molecule displays an unusually short O–N bond, a relatively long C–O bond and a moderately pyramidal O–NS<sub>2</sub> skeleton (O–N 133.1, C–O 148.5 pm, sum of bond angles at N: 347.4°).
