Aminals, Iminium Salts, C- and N-Aminomethylations, Naphthols

The product of the reaction of 1,2,3,4-tetrahydroquinoline (**1**) with 2-naphthol (**2**) and formaldehyde reported as the N-substituted tetrahydroquinoline **3** shows really the structure of the phenylogous bis-substituted tetrahydroquinoline **4**. The function of **1**, 6-methyl-1,2,3,4-tetrahydroquinoline (**9**) and 1-methyl-1,2,3,4-tetrahydroquinoline (**17**) as amines or C-nucleophilic compounds in Mannich condensations were examined.
