Laurentixanthone C (1), a new xanthone, was isolated from the stem bark of *Vismia laurentii* (Guttiferae or Clusiaceae), in addition to the known compounds vismiaquinone (2), bisvismiaquinone (3), and dammaradienol (4). The structures were established based on spectroscopic studies, notably of the 2D NMR spectra. Preliminary results showed that 1 is algicidal and strongly antibacterial against the Gram-positive bacteria *Bacillus megaterium* and *Chlorella fusca*, respectively.

Key words: *Vismia laurentii*, Xanthone, Anthraquinone, Biological Activity
