Galium humifusum, Rubiaceae, Iridoid Glycosides

Two new iridoid glucosides, humifusin A and humifusin B, with a 3-(4-hydroxyphenyl)-propionate ester unit were isolated from *Galium humifusum* together with 11 known iridoid glucosides asperuloside, scandoside, desacetylasperulosidic acid, asperulosidic acid, geniposidic acid, desacetylasperuloside, monotropein, V1, V2, V3 and daphylloside. The new iridoids were identified on the basis of spectral data. ¹³C NMR data for V1 and V2 iridoids are reported.
