Zanthoxylum dimorphophyllum, Rutaceae, New Diprenyl Coumarin

The alkaloids chelerythrine, norchelerythrine, oxyavicine, canthine-6-one, 4,5-dihydrocanthin-6-one, and γ -fagarine were isolated from *Zanthoxylum dimorphophyllum* bark, together with two coumarins, scoparone and dimoxylin. This latter is a novel compound whose structure was elucidated on the basis of its spectral data.
